Hamid R. Rezaei

Full-Stack Software Engineer

• Toronto, Canada • +1(226)224-5229 • dev.hamid.rezaei@gmail.com • hamid-rezaei.com

Full-stack software engineer with extensive experience designing and delivering Java/Spring services, secure APIs, data-intensive applications, CI/CD automation, and React interfaces. Proficient in containerization, build tools, and observability, with strong analytical and problem-solving skills.

Skills

- **Backend**: Java, Groovy, SQL, Bash, TypeScript
- **Frontend**: React (TypeScript/JavaScript), HTML, CSS, Flutter (Dart)
- **Frameworks**: JUnit, Mockito, Spring (Boot, MVC, Data [JDBC, JPA], Security, LDAP, AI, Batch, Integration), Vitest, Hono
- **DevOps & Infrastructure**: Git, Maven, NPM, Vite, Jenkins, Nexus, Docker, GCP, Grafana, Copilot, Claude Code, Solace
- **Storage & DB**: PostgreSQL, H2, GCP Cloud SQL, Firebase Storage, Cloudflare R2, MongoDB (NoSQL)

Professional Experience

Full-Stack Engineer | **Agency Securities Lending** | **HSBC** | Toronto, Canada **Jun 2025 – Present**

- Developing and maintaining Spring Boot (Java) microservices exposing REST APIs and integrating with other services.
- Building SQL-based Looker Studio dashboards over BigQuery data for revenue and balance analysis in partnership with product and business users.
- Co-architected a multi-service PoC that achieved 100% output parity with the existing platforms; built an AD-backed authentication service, API gateway, and a React frontend.
- Designed and implemented a context-aware, in-product AI assistant using React and Spring AI.
- Drove AI adoption across multiple teams by building an enterprise harness with script-backed skills integrating GitHub, Jira, Confluence, logs, and Jenkins, supported by training and knowledge-sharing sessions.
- Implemented Spring Security and JWT authorization, using JPA with a cloud-hosted relational database.
- Designed and led migration from legacy scripts to CI/CD pipelines in Jenkins (Groovy), automating builds, tests, security scans (Sonatype, Checkmarx), artifact versioning, Jira and Confluence integration, and deployments to all environments, improving release reliability and deployment pace.

Software & DevOps Engineer | **Trade Reporting** (Data Service Layer) | **HSBC** | Toronto, Canada **Apr 2021 – Jun 2025**

- Owned architectural design, code reviews, and delivery roadmap for a scalable data transfer and synchronization product built on Spring Batch and modular development.
- Contributed to the development of a highly configurable event-driven ETL application using Solace, Spring Integration (Java 21), and PostgreSQL, processing high-throughput real-time trading data while maintaining lifecycle event order.
- Implemented message acknowledgments, retries, exception handling, and transactional controls to reduce the risk of data loss during concurrent processing.
- Created parameterized Grafana dashboards to improve observability into application health and performance.
- Designed and owned a secure production file-retrieval application using React, Spring Boot, and Spring Security, giving authorized users a guided interface for locating and retrieving files while enforcing backend access controls.
- Reduced regression analysis from one week to three hours by parallelizing datasets across Jenkins pipelines and aggregating results in a multithreaded Spring Boot application.

Education

Master of Engineering in Environmental Engineering | **University of Western Ontario** | London, Canada **Jan 2019 – Dec 2019**

Bachelor of Science in Civil Engineering | **University of Tehran** | Tehran, Iran **Sep 2013 – Dec 2017**
